

Goal

We focus on improving your functional, nutritional and medical condition. During your stay our multidisciplinary team will collaborate with you to create a discharge plan and set realistic functional and health status goals.

Testimonial

Andy Andrews, a long-time member of the community and an active member of our wellness center, had a fear of falling after his procedure for a hip injury.

When we spoke to Mr. Andrews and asked him how our facility has helped him, he stated: "The heated pool at the McCamey Wellness Center not only provides me with the ability to do my exercises without the fear of falling, but is also therapeutic to my health."

Swing Bed/ Skilled Nursing Services

At McCamey Hospital, we understand there are times when a patient no longer needs the acute care they received when first admitted to the hospital. Patients often transfer from the hospital into a nursing or rehab facility to help them to recover and improve their physical functioning.

For those patients, we offer our swing bed/skilled nursing services. The term “swing bed” means an acute care bed can “swing” to the less-intense needs of a skilled nursing or convalescent bed where physical therapy, long term IV antibiotic therapy, and wound care can be provided.

After you complete a three-night stay in an acute care room, you can transfer to swing bed/skilled nursing services. We offer many amenities including private rooms, state-of-the-art technology, skilled physicians, physical therapist, wound care specialist, and skilled nursing. McCamey Hospital has a home-away-from-home atmosphere with one-on-one treatment.

Our Swing Bed/Skilled Nursing program is federally approved for this special care.

Insurance

Medicare and most commercial insurances cover swing bed programs as well as the skilled nursing services. The services are usually covered under the “Skilled Nursing Facility” benefit category. The first 20 days are covered 100% under Medicare, and the remaining eligible days are covered up to 80%.

Qualifications include:

- ▶ Your swing bed/skilled nursing must be related to an acute hospital stay.
- ▶ Your doctor must determine a need for daily skilled care such a physical therapy, IV therapy, or wound care.
- ▶ A patient must be hospitalized as “acute care inpatient” (not as an “observation patient”) for a minimum of three consecutive midnights within the past 30 days.
- ▶ An admission can come from any facility after three midnights as an inpatient in acute care.
- ▶ You have Medicare Part A or other insurance coverage with hospital-based, skilled-care benefits and days available for skilled level of care.
